Dear fellow breeders and friends of the Kalahari

We would like to welcome all to the first GROOT KALAHARI VEILING

GROOT KALAHARI
VEILING

There is something about the red sand of the Kalahari that settles deep in one's heart. It is this shared connection that brings together three respected wildlife breeders from this remarkable region: Japie van Niekerk of Kalahari Genetics, Louis van der Watt of STS Meletse, and Piet du Toit of Piet du Toit Wildbedryf.

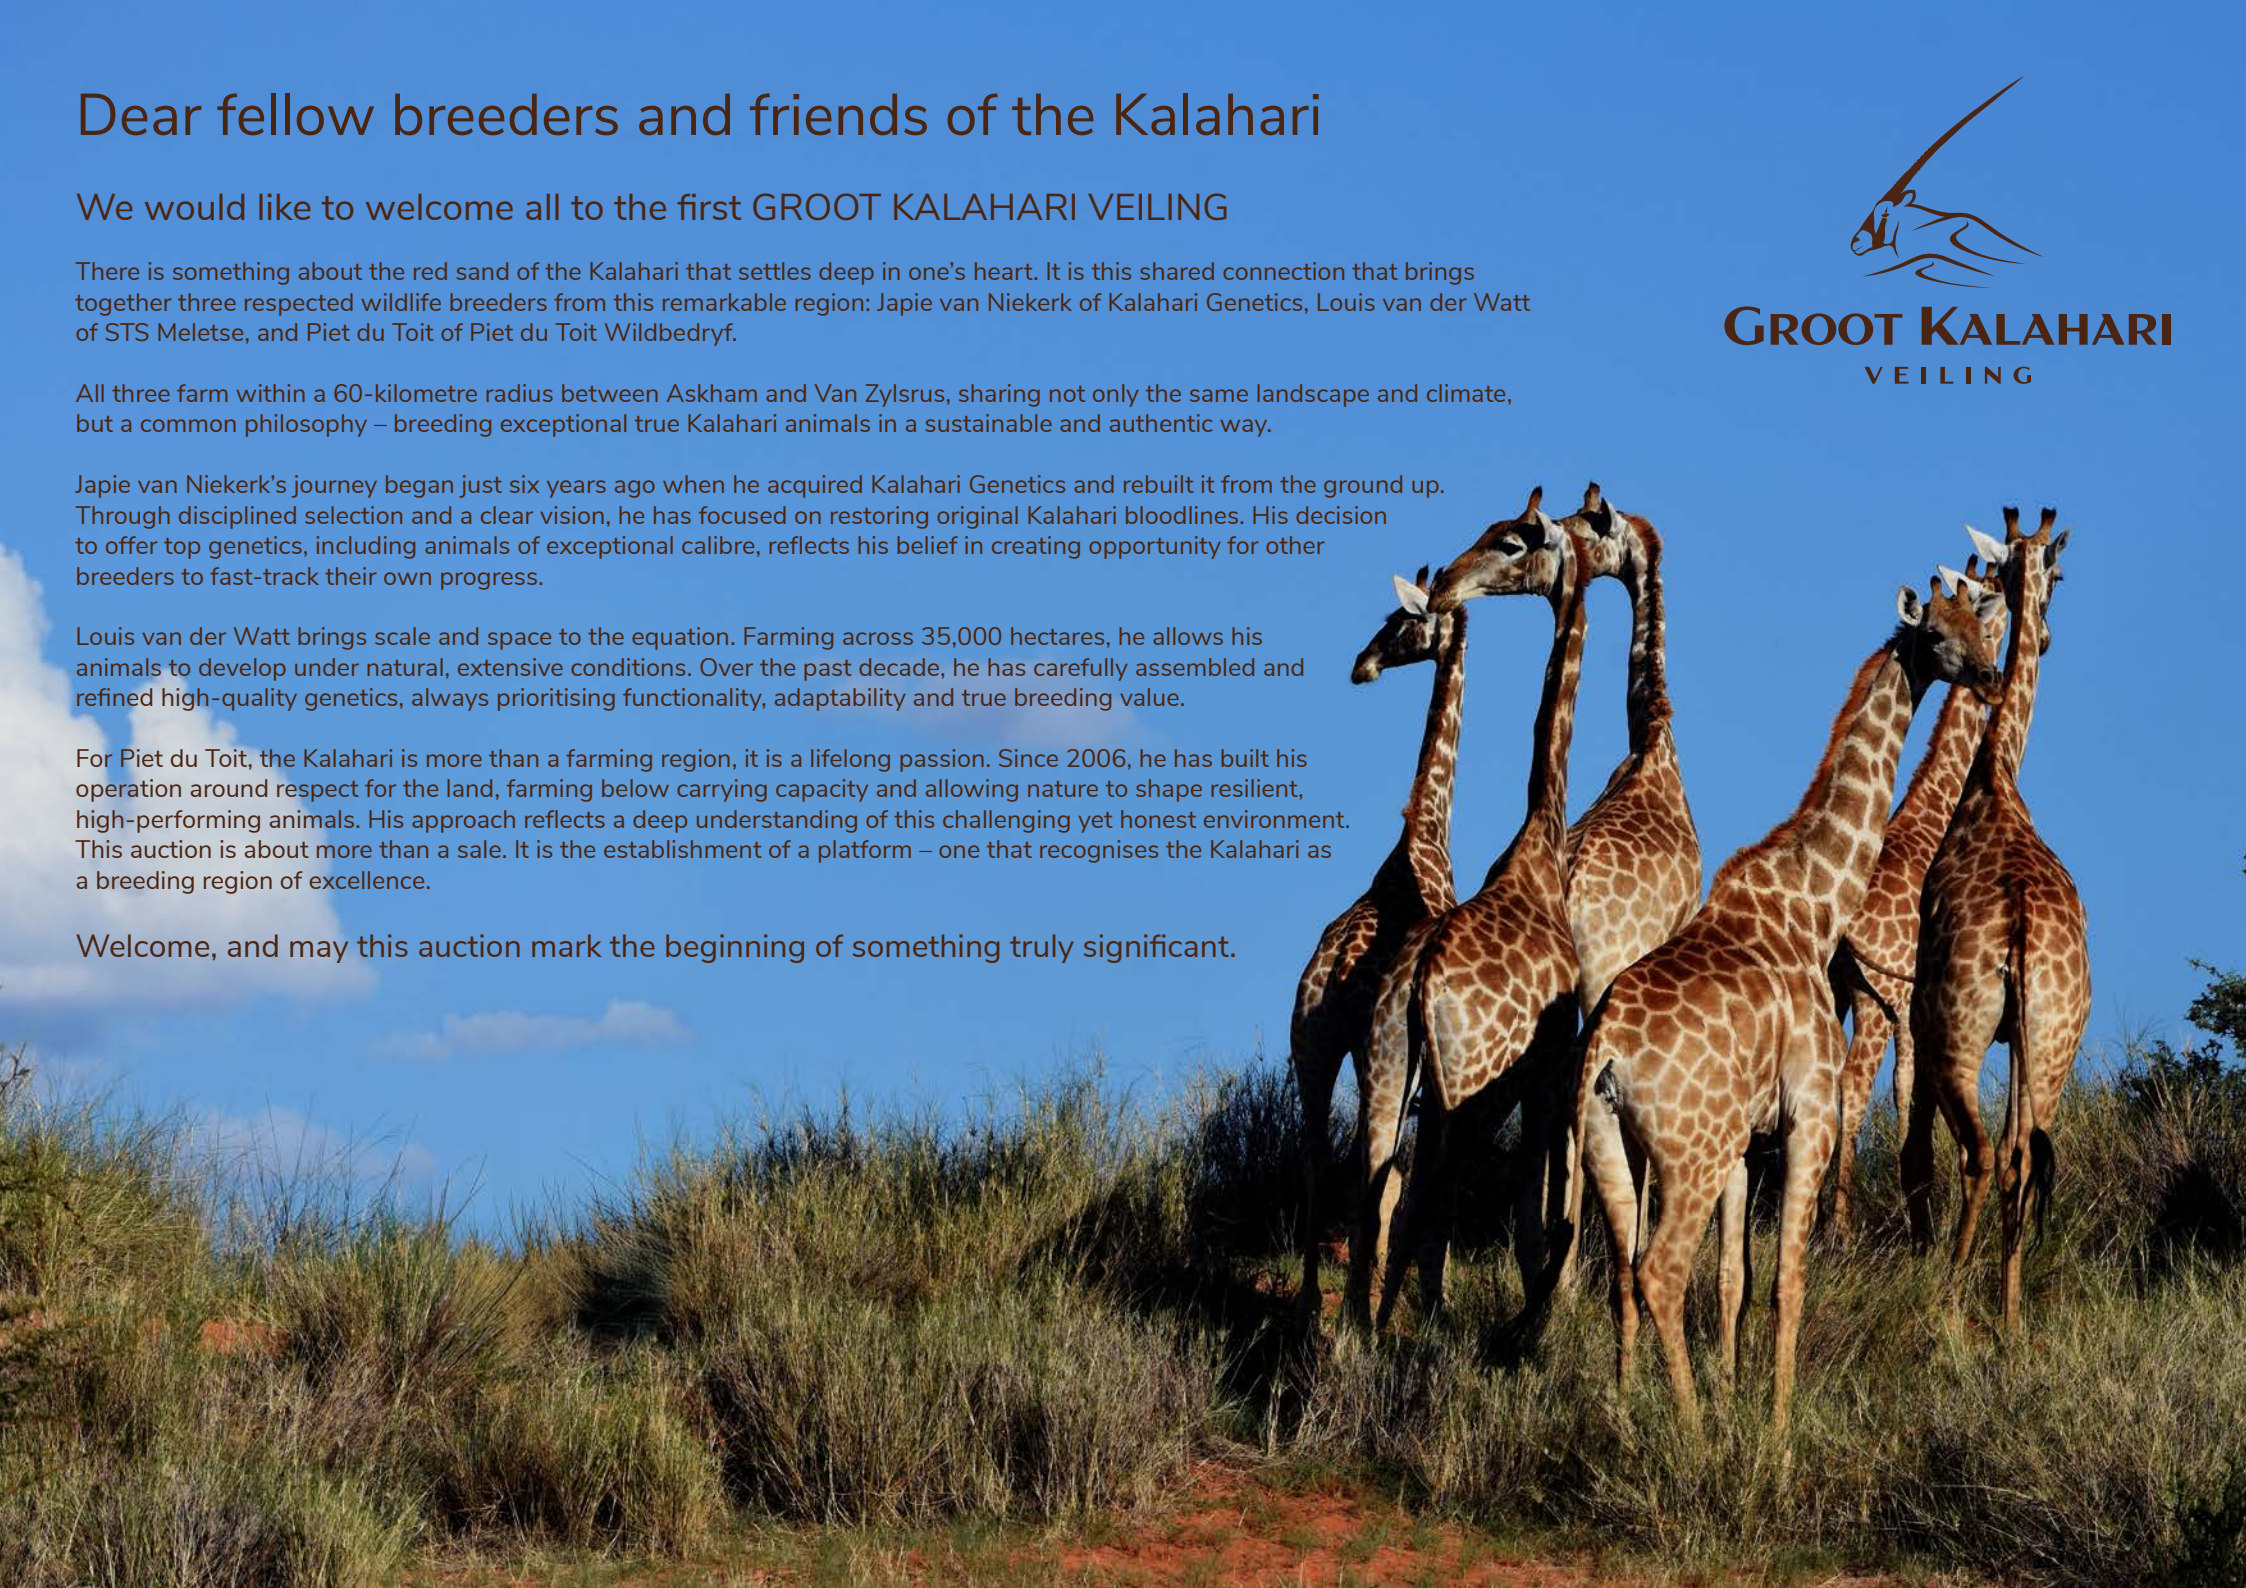

All three farm within a 60-kilometre radius between Askham and Van Zylsrus, sharing not only the same landscape and climate, but a common philosophy – breeding exceptional true Kalahari animals in a sustainable and authentic way.

Japie van Niekerk's journey began just six years ago when he acquired Kalahari Genetics and rebuilt it from the ground up. Through disciplined selection and a clear vision, he has focused on restoring original Kalahari bloodlines. His decision to offer top genetics, including animals of exceptional calibre, reflects his belief in creating opportunity for other breeders to fast-track their own progress.

Louis van der Watt brings scale and space to the equation. Farming across 35,000 hectares, he allows his animals to develop under natural, extensive conditions. Over the past decade, he has carefully assembled and refined high-quality genetics, always prioritising functionality, adaptability and true breeding value.

For Piet du Toit, the Kalahari is more than a farming region, it is a lifelong passion. Since 2006, he has built his operation around respect for the land, farming below carrying capacity and allowing nature to shape resilient, high-performing animals. His approach reflects a deep understanding of this challenging yet honest environment. This auction is about more than a sale. It is the establishment of a platform – one that recognises the Kalahari as a breeding region of excellence.

Welcome, and may this auction mark the beginning of something truly significant.

OVERVIEW - Herd average remains a benchmark in the breeding industry and this herd speaks for itself. The composition, horn length, and symmetry of these two cows, together with their paternal sister, the exceptional 48" Neena, reflect the herds true quality. Oryx heifers carefully selected from Kalahari cows exceeding 40", bred to a 43" bull (2014), were bred to VMAX (45" Koos du Plessis bull) and resulted in a herd that now boasts multiple cows exceeding 44". To ensure continued genetic diversity, the Khamab (46" Piet du Toit) bloodline was introduced in 2024. The herd is currently running with KS, a 45" bull and paternal brother to the renowned 47" Boesman. An exciting combination of proven bloodlines, structural quality, and superior horn potential is evident throughout this exceptional herd.
